

# FIRE PROTECTION'S MOST TRUSTED NAME IN TEXAS

## Fire Sprinkler & Suppression

Fire doesn't discriminate. Unchecked, it takes down any property, possession or person in its path. At Allied Fire Protection, our job is to stand in its way — detecting and stopping fire as fast as possible — to save priceless lives and valuable property. Fire may never be 100% preventable, but it is containable. When you entrust us with the irreplaceable, we accept our responsibility with a promise and commitment to protect you.

## Fire Alarm & Detection

Allied Fire Protection doesn't fight fire with fire. We fight with prevention, detection and active monitoring. Ever alert and ready to rapidly respond, our only job is to protect the people, facilities and physical assets that are truly priceless to you. Allied Fire Protection works to continually perfect the art and science of fire detection in order to immediately alert those on-premise, as well as the proper authorities, first responders and stakeholders.

# FIRE SPRINKLER AND FIRE ALARM SYSTEMS

Allied Fire Protection built its name designing, installing and repairing fire sprinkler systems. Over the years we've built on that foundation to provide a full scope of fire detection and fire alarm systems. We have our own Alarm Planning Superintendent on staff, licensed to draw, design and submit plans to the Fire Marshal. For fire safety, life safety and property protection, Allied Fire Protection has a proven reputation as the name to trust.

## DESIGN, INSTALLATION, INSPECTION AND SERVICE OF:

- Fire Sprinkler Systems
- Fire Alarm and Detection Systems
- Fire Alarm Monitoring Services
- Fire Extinguishers
- Fire Suppression Systems
- Wireless Fire Alarm Systems

## PRE-CONSTRUCTION SERVICES

- Review specific requirements of the owner/developer
- Develop design criteria for life safety systems
- Perform preliminary design studies and municipal information
- Coordinate with other team members to ensure a cohesive design plan
- Develop scope and outline specifications
- Budgeting

The construction and building service industries are changing as new codes and standards are being introduced constantly. That makes it increasingly more important to consider life safety systems at the earliest development stage of any new project. Allied Fire Protection works with development companies, engineers, architects and general contractors before the designs are finalized to ensure that the life safety systems are the best option that meet the needs of the project. This teamwork approach allows us to deliver the best and most cost effective solution to the hazard by utilizing not just the fire protection system design, but taking into consideration the building layout, construction techniques and customer needs.

## DESIGN

- Coordinate design drawings, specifications and calculations
- Locating equipment and pipe routing to minimize conflicts
- Assist with any third party reviews
- Attend coordination meetings and BIM design as needed
- Revise design to accommodate any changes before or during the project

We engineer our fire protection and life safety systems early on – during the design phase – so there are no surprises at installation. Since most of our team have been field technicians, we understand that step better than most. At Allied Fire Protection, our technical construction documents are correct to start with, saving time and costs for our customers. These are the advantages that help us bid more accurately and aggressively when comparing our full-service strengths against installing contractors.

## INSTALLATION

- Pre-construction planning and project management
- Preliminary layout
- Timely material deliveries
- Scheduling to meet the needs of the project
- Adequate manpower to ensure a timely install
- Commissioning of system(s) and equipment

Fire sprinkler and life safety systems are unique to each project, so we always specify quality, proven products tailored to each customer's specific needs. Whether it's a new installation, retrofit, remodel, or repairs on an existing system, the truest measure of success comes at the point of installation. Allied Fire Protection employs expertly trained and highly professional installation technicians to ensure the system is installed on schedule and on time for needs of the customer. We use only proven materials and products, properly installed, to ensure the best possible product is delivered to the client.

## UNDERGROUND

- Water main taps/ municipal connections
- Underground vaults for specific jurisdictional requirements
- Backflow preventer assemblies, water meters and remote fire department connections
- Underground boring
- Underground piping
- Fire hydrants and private fire service mains

Even the finest fire safety system is of little value if the connection to the municipal water main isn't expertly engineered and installed. Countless details are critical to the operation of this underground portion of the system – including code requirements, pressure settings, proper materials and even excavation standards. At Allied, our experience and reputation for excellence also make us a frequent subcontractor for other companies in need of underground completion.

## INSPECTION, TESTING AND MAINTENANCE

- Fire sprinkler, alarm, suppression and handheld fire extinguishers
- Fully licensed and NICET accredited Inspectors
- Backflow preventer assembly certifications
- Fire pumps
- Special hazard systems

When a fire sprinkler or life safety system is in need of regular scheduled inspection, maintenance or repair – who better to perform those services than experts with proven skills at design and installation? As an experienced full-service Fire Protection contractor, our professionals can handle any and all aspects of your fire protection, fire alarm and life safety systems – from inspections to testing and maintenance.

## NON-STOP SERVICE

- 24-hour dispatching service
- 24-7 emergency response
- Fully equipped service vehicles
- Expertly trained service personnel
- Troubleshooting
- Non-emergency repairs

Emergencies never conveniently schedule themselves, so your fire and life safety systems have to be 100% ready, 100% of the time. So do we. 24 hours a day, 7 days a week, 365 days a year, we're ready, willing and able to respond instantly. Because immediate problems require immediate action – even on systems we didn't install – our service teams respond around-the-clock for your complete peace of mind.

## FIRE ALARM MONITORING

A fire safety system is only as good as the people monitoring it. Around the clock attention and rapid response are of paramount importance, but it also helps if the people monitoring the alarm know everything there is to know about the system itself. Allied Fire Protection means the best in fire safety systems AND the best in fire safety monitoring.

## EXPERIENCE IN EVERY INDUSTRY

Every facility needs fire and life safety systems but buildings come in all shapes and sizes, with risks varying by industry, occupancy and location. Allied Fire Protection has decades of experience across the broadest spectrum of commercial facilities from large industrial warehouses and high rise office buildings to retail shopping centers, hotels and restaurants.

We work in medical, childcare and senior health care facilities, as well as data centers, auto dealerships, self-storage facilities and offshore oil platforms. The bottom line is that we know our way around every aspect of fire and life safety and we get the job done with the highest level of quality customer service.
